Subject: RE: Soitec wind day question

Donna,

Footnote 3 of Table 1-6 of the DPEIR (p. 1.0-42) appears to indicate that a "wind day" is defined as having an average wind speed of higher than 15 mph. I have asked Dudek to confirm this.

Thanks,

Subject: Soitec wind day question

Hello Robert and Jim,

I am seeking an answer to the following questions:

- On the AECOM one-page construction water demand estimation sheets for Rugged Solar and Tierra Del Sol Solar, what is the definition of a "wind day" ?
- Is it 20 mph?

Please let me know so I can better formulate my comments and provide factual backup documentation.

Thank you

Donna Tisdale
